

AI for UK rail engineering teams.

Where rail domain expertise meets AI.

THE SHIFT

AI is reshaping rail engineering. The firms that act now will compound.

01

Tenders are asking.

AI questions in client briefs are now standard. Bluffing the answer loses the work. Evidence wins it.

02

Engineers are buried.

Most of senior week absorbed by admin and template-driven work. Hours that should compound the firm.

03

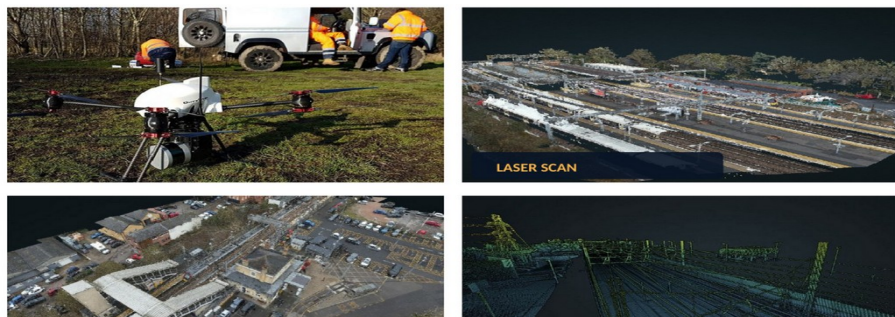

Quality is the lever.

Rework cycles bleed margin every project. Most firms track the rate. Few track the root cause.

AI IN ACTION

Built. Deployed. In live use.

Five rail AI capabilities deployed across surveying, drawing take-off, assurance, tender response, and form drafting. The same architecture and rail-domain rigour applied to your X.

01 · AI-empowered survey processing

A national station network surveyed in weeks, with hidden defects surfaced by AI.

7,650

300+

Survey flights

0

Closures

02 · AI-empowered drawing take-off

Automated linear take-off from rail drawings. Audited measurements, hours not days.

Time reduction

AI IN ACTION · CONTINUED

Two more capabilities. Same architecture. Different deployment.

03 · AI-empowered design review and verification

AI co-pilot for design reviews, requirements drafting, and verification traceability.

The golden thread stays unbroken from design intent through to operational acceptance.

04 · Tender knowledge base

A rail-specific knowledge graph trained on standards, taxonomy, and project history.

Drove tender response quality and efficiency. Every output cited, grounded in your domain.

AI IN ACTION • AND IN PILOT

05 • Scribative (Pilot)

Doc assistance for PACE-compliant rail forms.

Section-by-section drafting with cited evidence and compliance gates. The product expression of everything else on these pages, in a tool engineers can use daily. Currently in pilot.

FIRST MOVE

Find your X. In five minutes.

AutomateX runs a free, rail-specific AI Readiness Assessment. Twenty questions across five operational pillars. You receive a personalised report that names your strongest pillar, your two weakest, and one quick win for this week. No generic advice. No AI snake oil.

automatex.uk / Take the Assessment

THE FIVE PILLARS

How we measure AI readiness in rail.

Five operational pillars that, together, describe how a rail firm absorbs AI without breaking assurance.

01

RESILIENCE

Hero Dependency

How resilient delivery is to senior absence and knowledge loss.

02

THROUGHPUT

Expertise Leverage

How much senior time becomes output, and how cleanly capability scales with the pipeline.

03

LEARNING

Continuous Improvement

How much better each project makes the firm.

04

QUALITY

First-Time Approval

How often engineering deliverables pass first time. And whether you know why they do not.

05

COMPETITIVENESS

AI Readiness

Whether your tender response can evidence AI, not promise it.

Most teams score low on two. That is where the X is hiding, and where AutomateX goes to work.

THREE WAYS FORWARD

Three ways to engage. You pick the one that fits.

Not a sequence. Options. Each step credits forward.

01

CONVERSATION

1-hour CPD

£300

£250 with Assessment

Group session covering the AI-in-rail landscape, real deployments, and a framework for spotting your X internally. CPD certificate included.

RECOMMENDED

02

DIAGNOSIS

Find Your X Workshop

£1,800

£1,500 with Assessment

Hosted, structured workshop identifying top friction points across your team. Output: a tailored Find Your X Report with options costed. Workshop fee 100% credited toward Build within 60 days.

03

IMPLEMENTATION

Build Engagement

Outcome-priced

Custom-scoped

The actual AI implementation. For teams who already know their X and want to move. Outcome-priced against a defined ROI hypothesis.

THE FOUNDER

Bill Guo FICE CEng MEng

Founder and Engineering Director, AutomateX Ltd

ICE Asset Resilience Merit Award winner. Network Rail, TfL, HS2, and Tier 1 consulting and contractor background. Ten years on both sides of rail delivery, across more than 100 rail businesses.

In 2023 I started using AI to scale a rail consultancy from zero to about £1m ARR by 2025, and won one of 16 tactical design partner seats on Southern Renew Enterprise. The tools are not theory. They are how I got here.

We should learn to say no to the things AI can do better.

Find your X. Find your first move.
