

Scribative Bootcamp

Your form. Your SOP. Your playbook.

Build a workflow your railway team recognises.

We are inviting teams on the Scribative OS waitlist to build their own playbook: a customised agentic workflow for preparing railway deliverables. We start with your engineering process, organise the context it needs, and test the draft through your team's review loop.

Start with one recurring deliverable.
A canopy refurbishment Form G. A temporary works Form C. Your team's form, evidence and way of working.

Facilitated by a Chartered Civil Engineer with experience writing and signing railway deliverables.

WHAT WE WORK TOWARDS

A documented SOP
Your standard operating procedure: how the team gathers evidence, drafts and reviews the deliverable.

Your playbook in Scribative
A workflow shaped around your template, relevant standards and established house style.

A cited first draft on your data
Source references to support review, with missing evidence and open questions kept visible.

A marked comparison
Review against a submission your team has already issued, so your engineers can assess the result.

FROM YOUR PROCESS TO YOUR PLAYBOOK

01	Find the SOP	Map how you produce the form today. Agree the scope, evidence needs and quality bar.
02	Assemble context	Bring together standards, templates, past submissions and the project pack. Confirm permitted access and use.
03	Build the playbook	Configure the agreed workflow around your team's process, drafting requirements and review controls.
04	Draft on your data	Try a first draft on a real project. Check the citations and flag gaps for engineering attention.
05	Mark and hand over	Compare with your issued submission, refine with your engineers and agree readiness and next steps.

The engineer reviews. The engineer judges. The engineer signs.
The playbook supports preparation; it does not replace engineering accountability.

Bring one form and the process behind it.
We can explore whether it is a useful starting point for your team.

Discuss your playbook

This overview is free to download. The Bootcamp is a separate engagement. Scope and arrangements are agreed with your team.
