REVIEW-ROUND LOG

Count the rounds.

A review-round log for one deliverable. Each time comments come back, count them and sort each one into a single category. After a few deliverables, the totals may show which round is worth fixing first.

DELIVERABLE _____ DISCIPLINE _____ FIRST SUBMITTED _____

ROUND	RETURNED	COMMENTS	EVIDENCE MISSING Not in the pack	ALREADY ANSWERED It was in the pack	DESIGN CHANGE A real engineering point	FORMAT AND ADMIN Template, title block, references	NOTES
1							
2							
3							
4							
5							
Total							

Reading the pattern

- **Mostly already answered.** The evidence was there, but the reviewer could not find it in the time they had. A clearer trail from each statement to its source might save a round.
- **Mostly evidence missing.** The gap opens before submission. A check of the pack against the requirements, before it goes, could catch it.
- **Mostly design change.** This is the review doing its job. Probably leave it alone.
- **Mostly format and admin.** A template or a short checklist is often the cheapest fix.

How to use it

01 Start a sheet when the deliverable is first submitted.

02 Log each round on the day the comments come back. One comment, one category.

03 Compare the totals across 3 to 5 deliverables of the same type.

04 Pick the category you would most like to see shrink, and look there first.

Where the totals point at evidence, that is the problem Scribtive is being built for. Where they point somewhere unexpected, we would be glad to talk it through.
